VesTallyToken (VTT) is a deflationary token designed to become scarcer over time. What makes VTT unique is the proposal strategies which leverage weighted governance functionality built into the VTT dashboard and gives holders of VTT exclusive voting rights to determine the course of action for quarterly proposal strategies and charitable initiatives.

Weighted blockchain voting gives holders a voice in proposal strategies outcomes aimed towards the growth of VTT.

### **Proposal Strategy Examples:**

Expand DAPP to include new NFT minting

Expand DAPP to include new NFT Gaming

Add custom wallet functionality to DAPP

Explore Additional DAPP functionality like Staking

Holders will determine 1 year, and 5 year proposal strategies for digital asset outcomes. When the term is complete holders will vote via the block chain on the proposal strategies to determine if the strategy outcome.

These actions establish the short-term and long-term proposal strategies for VTT decentralized application development. In addition to VTT application decisions any VTT holdings are viewable utilizing the VTT dashboard on the contract homepage. All project wallets are posted and viewable on BSCScan as well.

The VTT tokenomics keep voting equitable. Typically, smart contract logic is necessary to ensure fair voting rights; VTT tokenomics alone discourages voters from transferring holdings for additional vote staking. The tokenomic cost associated with transferring for the sole purpose of multiple voting discourages holders from attempting to "game the system."

## TOKENOMICS

<b>Holder Rewards</b>	5%
<b>Project Proposal Strategies</b>	4%
<b>Burn</b>	2%
<b>Charity &amp; Social Actions</b>	1%
<b>Marketing &amp; Logistics</b>	1%

## General description

VesTallyToken is unique among deflationary coins that utilize tokenomics as the VTT contract does not utilize the liquidity pool to reward developers in an unbalance manner. (all holders are treated equally). VTT maintains a balanced  $X*Y=K$  liquidity pool and empowers token holders with voting rights.

## Functions of tokens

- Project account is viewable on the application dashboard.
- 70% Liquidity pool will be locked through Pinksale
- Utilizes a deflationary Token to hedge \$USD inflation
- Utilizes tokenomics to reward holders.
- Utilizes tokenomics for proposal strategies and charitable initiatives.
- Token burning to increase liquidity pool valuation.
- Utility within the website dashboard for:
  - Voting
  - Account holdings reports

Honest liquidity pool distribution, transparent smart contract functionality, and rewarding tokenomics make VTT the ideal token to buy, hold, trade, and utilize in 2022 and on.

VesTallyToken is unique among many deflationary coins on the market as the VTT contract does not utilize liquidity pool contributions to reward developers or early adopters or utilize unbalanced liquidity.

(All holders are treated equally)

There are various strategies in place to decrease the supply of VestTallyToken over time, meaning individual holdings will become more valuable and receive a higher valuation and stronger voting weight over time.

5% of every transaction is proportionally distributed back to token holders. No token rewards will ever go to the liquidity pool (we feel this would devalue VTT), additionally no token rewards will ever go to the burn address.

4% of every transaction is deposited into the VTT project address. Quarterly voting will occur to determine which proposal strategy will be utilized for short term and long-term dapp initiatives.

2% of every transaction is sent to a true burn address.

1% of every transaction is sent to a charity address so VTT holders can vote on non-partisan donation initiatives.

1% of every transaction is sent to a marketing address to fund VTT growth.
